* The registrar is entitled to pay the deposit in instalments at any time during a calendar year so that the minimum amount of deposit is paid at the latest by 31 December of the given calendar year.

** The limit of uncharged queries for a given registrar and calendar month is determined from the number of .cz domains of which the given entity is the designated registrar as of the 1st day of the calendar month at 12:00 midnight, multiplied by the number of uncharged domain queries.
If this calculation results in a limit that is below the "minimum number of uncharged queries regardless of the number of domains," the uncharged query limit for the given calendar month equals the minimum number of uncharged queries regardless of the number of domains.
Each registrar query sent to the EPP interface is deducted from this limit. Once the limit for uncharged queries is reached in a single calendar month, all further queries are charged.
All EPP queries of the registrar are included in this limit.
A query concerning one item (domain, contact, etc) is deemed to be a single EPP query. If an EPP query includes queries concerning several items of the central registry (domains, contacts, etc), then any query concerning a single item is deemed to be a separate EPP query for the purposes of imposing a charge.
*** If a registrar uses the services of both registries simultaneously, the annual registration fee is a single charge of CZK 60,000.
